	ADD WATER! Never feed a water-depleted diet. See Opie's pictures at catinfo.org - Urinary Tract Health page - for a good look at the tremendous suffering often caused by feeding water-depleted diets to cats. Contrary to popular belief, cats do not drink enough water from their water bowl to make up for the deficit in water intake when fed dry foods. Cats do not have a high thirst drive. Many veterinarians have reported a significant decrease in urinary tract cases when dry food is removed from the diet and water-rich diets are fed instead.
